

OBO floor trunking

For reliable cable routing via the floor

The OBO floor trunking expands the portfolio for the supply of power and data in modern office and administrative buildings. This trunking permits cable routing via the floor –

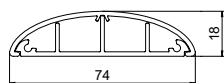

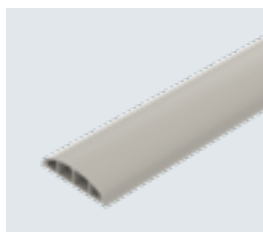

which is ideal for the last metres up to the workstation. The separation of different voltage levels is possible through at least two chambers.

Overview of the advantages

- Non-slip trunking, consisting of a cover and base
- Separation of power and data cables possible
- Connection of the trunking possible via OBO joint connector
